

Gunther Wegner from LRTimelapse did a first review of the RamperPro

Door andre op wo, 04/02/2014 - 22:50

[1]

Gunther Wegner from LRTimelapse.com [2] and Matthias Uhlig just posted the first video review of the RamperPro advanced timelapse controller. The RamperPro is now supported in the latest version of LRTimelapse. This way you are sure that the XMP files from the RamperPro are compatible with LRTimelapse. This way you can use the very accurate XMP corrections of the RamperPro with the great post production capabilities of LRTimelapse.

The unfortunately didn't mention the image analysis capability of the RamperPro :-). But we are sure that they will like this feature when they check it out. We are going to make a few video's ourselves about how to use the RamperPro. Please keep checking our blog for these upcoming how-to-use-the-RamperPro videos.

Here is the video that Matthias and Gunther made:
