

Dynamic Perception Stage One Limit Switch Stops announced

Submitted by andre on Mon, 10/08/2012 - 21:35

[1]

Dynamic Perception had announced Limit Switch Stops that make it possible to easily attach the Dynamic Perception Limit Switch Kit to your Stage One slider. The cart of the Stage One already had mounting holes for the attachment of the multi function (limit) switches, but there were no stoppers available similar to the ones that you can use with the Stage Zero dolly. We fixed this at ElysiaVisuals by providing our own stoppers which are a big version of the ones that you use for the Stage Zero.

The Limit Switch Stops consist of a set of threaded stops that you can screw into the mid-spans of your Stage One Slider. We highly recommend the limit switches together with these stops when you are running your Stage One unattended because this will make sure that your slider will stop when it reaches the end of the track.
